Thank you, I appreciate the information. It always help to get clarifications from people closer to the event and information. We are actually getting a gram from Cincinnati Water Works that they are using for calibration and we have a certified standard coming in from ITC from Japan. I have been in contact with Eastman and they have yet to get back with me.

Just to give you an overview of our response in these situations. Our laboratory response protocols take a tiered approach to rapid screening and analysis. When looking for unknowns or while waiting for pure or certified standards for knowns, we use what we have to initiate screening via a variety of mass specs, looking at we get and/or all forms of the original compound or formulation when we know what it is. That is what we would expect the known compound or mix in a plume. We take a qualitative approach and then as we identify analytical parameters and acquire more pure standards we back check our qualitative data and quantify. We are quite comfortable with dealing with the vagaries of unknowns and mixes.

This is sold through Eastman Chemicals. The raw product is a mixture of chemicals, for analytical purposes you will need a standard.

Thank you for the responses. I've been in contact with Test America.  
They are running it in Canton, OH and Philly.  
They have a contact person:

**Ex. 6 - Personal Privacy**

**Ex. 4 - CBI**

If anyone has any info where I can obtain some raw product, I would appreciate contact info.

Thanks
